CSC Access Control

CSC's access control platforms are designed for a secure door platform that is both expandable for single facilities large and small, as well as multi-location enterprise based systems that can operate off a single server and access card or fob per user. CSC provides a turnkey solution from wiring to power supplies, door hardware and software integration. From takeovers of existing proprietary panels to new facilities, we have over 20 years' experience in access control. Some of the main features of our access control integration are the following:

- Provide easy to use system for management
- Integration with alarm panels
- Facility mapping features
- Productive sequel based reports for time driven access information
- Fully functional visitor management system
- Web Browser Client available
- Quick history tracing
- Schedule weekly reports
- User definable events and alarm colors
- Employee management information database
- Instant lockdown or unlock of your entire facility
- Elevator controls
- Time based lock and unlock schedule of doors
- Door Ajar Alarms on all doors that have egress motion
